

AntiOxidants: “The Real Superhero”

Body cells and tissues are threatened continuously by damage caused by toxic free radicals and reactive oxygen species (e.g., peroxides) which are produced during normal oxygen metabolism, by other chemical reactions, and by toxic agents in the environment. Free radicals, once formed, are capable of disrupting metabolic activity and cell structure. When this occurs, additional free radicals are produced which, in turn, can result in more extensive damage to cells and tissues. The uncontrolled production of free radicals is thought to be a major contributing factor to many health issues.

Antioxidants help protect the body from the formation of damaging free radicals. Antioxidants are free radical scavengers that neutralize these free radicals, thus helping to correct the oxidative imbalances associated with a depressed immune system. They are especially important for anyone with excessive stress which is also known to depress the immune system.

Hazle Drugs brand of “AntiOxidant Essentials” is a scientifically designed formula that contains optimal levels of many well-known antioxidants including Betacarotene, Vitamins C & E, N-Acetyl Cysteine, Glutathione, Selenium and other nutrients critical in neutralizing harmful substances called “free-radicals” found throughout the body. These free radicals are prime suspects in many degenerative and age related maladies. Antioxidants are an essential nutritional supplement for everyone, especially those concerned about aging and other related health concerns.
